Skytron Pendant Controls

Dear Valued Customer,

Effective 1 July 2011 Skytron will no longer be supporting the first generation pendant controls and Skytron considers this older generation I controllers to be obsolete. These older generation controls will no longer be included in the rebuild program.

Version I and Version II pendant controls do not share any common parts, which prohibits early generation controls from being used as cores for the new Version II pendant.

While we pride ourselves in our dedication to the long-term support of all Skytron products, it has become increasingly difficult and in many cases impossible, to obtain replacement parts for the version I pendant controls. To this end, Skytron has developed Version II pendant controls to allow the continued support of older Skytron Tables. The new Version II controllers provides improved features and reliability including back lit display, 5mm silicon covers, and fluid resistance.

Skytron will no longer offer part support for these early version pendant controls. For any questions or help with pendant control identification, please contact your local distributor or call Skytron Service.

Regards

Bill Wendt
